# PNOZ m EF 8DI2DOT

## PILZ
### THE SPIRIT OF SAFETY

▸ Configurable, safe small controllers PNOZmulti 2

Contents

Contents

# 1 Introduction

## 1.1 Validity of documentation

This documentation is valid for the product PNOZ m EF 8DI2DOT from Version HW:01, FW:01.00.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

## 1.2 Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

## 1.3 Definition of symbols

Information that is particularly important is identified as follows:

**DANGER!**

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

**WARNING!**

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

**CAUTION!**

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

**NOTICE**

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

**INFORMATION**

This gives advice on applications and provides information on special features.

# 2 Overview

## 2.1 Scope of supply

▸ Expansion module PNOZ m EF 8DI2DOT

▸ Jumper

## 2.2 Unit features

Application of the product PNOZ m EF 8DI2DOT:

Expansion module for connection to a base unit from the PNOZmulti 2 system.

The product has the following features:

▸ Can be configured in the PNOZmulti Configurator

▸ Semiconductor outputs:

– 2 dual-pole safety outputs
Up to PL e of EN ISO 13849-1 and SIL CL 3 of EN IEC 62061, depending on the application.
The outputs are suitable for controlling a press safety valve in accordance with EN 692.

– Open circuit detection configurable

▸ 8 inputs

– The inputs can be used to evaluate run monitoring for press applications.

– Configurable pulse suppression at the inputs

▸ LED display for:

– Error messages

– Diagnostics

– Switch state of the outputs

– Switch state of the inputs

▸ Monitoring of shorts across contacts at the inputs by test pulses

– from the base unit

– from the expansion module

▸ Monitoring of shorts between the safety outputs

▸ Plug-in connection terminals:
Either spring-loaded terminal or screw terminal available as an accessory (see Order references for accessories).

▸ Please refer to the document "PNOZmulti System Expansion" for details of the base units PNOZmulti 2 that can be connected.

## 2.3    Front view

**Legend**

| | |
|---|---|
| X1, X3: | Inputs I0 – I7 |
| X2: | Dual-pole outputs O0+, O0- and O1+, O1- |
| X4: | Supply connections 0 V, 24 V |
| | Test pulse outputs T0, T1 |
| LEDs | POWER, Run, Diag, Fault, I Fault, O Fault |
| | Terminal LEDs: Each terminal is assigned an LED. |

# 3 Safety

## 3.1 Intended use

The expansion module may only be connected to a base unit from the configurable system PNOZmulti 2 (please refer to the document "PNOZmulti System Expansion" for details of the base units that can be connected).

The configurable system PNOZmulti 2 is used for the safety-related interruption of safety circuits and is designed for use in:

▸ Emergency stop equipment

▸ Safety circuits in accordance with VDE 0113 Part 1 and EN 60204-1

▸ The inputs of the module PNOZ m EF 8DI2DOT can be used to evaluate run monitoring for press applications.

▸ The outputs are suitable for the control of a press safety valve in accordance with EN 692.

▸ The product PNOZ m EF 8DI2DOT meets the requirements of the standards EN 81-20, EN 81-22 and EN 81-50, harmonised under the Lifts Directive 2014/33/EU, and the requirements of the standard EN 115-1, harmonised under the Machinery Directive 2006/42/EC.

▸ The programmable safety system should be installed in a protected environment that meets at least the requirements of pollution degree 2.
Example: Protected inside space or control cabinet with protection type IP54 and corresponding air conditioning.

The product PNOZ m EF 8DI2DOT can be used in furnaces in accordance with EN 298.

The following is deemed improper use in particular

▸ Any component, technical or electrical modification to the product,

▸ Use of the product outside the areas described in this manual,

▸ Use of the product outside the technical details (see Technical details [📖 22]).

> **!** **NOTICE**
>
> **EMC-compliant electrical installation**
>
> The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

## 3.2 System requirements

Please refer to the "Product Modifications PNOZmulti" document in the "Version overview" section for details of which versions of the base unit and PNOZmulti Configurator can be used for this product.

## 3.3 Safety regulations

### 3.3.1 Safety assessment

Before using a device it is necessary to perform a safety assessment in accordance with the Machinery Directive.

Functional safety is guaranteed for the product as a single component. However, this does not guarantee the functional safety of the overall plant/machine. In order to achieve the required safety level for the overall plant/machine, define the safety requirements for the plant/machine and then define how these must be implemented from a technical and organisational standpoint.

### 3.3.2 Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is someone who, because of their training, experience and current professional activity, has the specialist knowledge required to test, assess and operate the work equipment, devices, systems, plant and machinery in accordance with the general standards and guidelines for safety technology.

It is the company's responsibility only to employ personnel who

▸ Are familiar with the basic regulations concerning health and safety / accident prevention,

▸ Have read and understood the information provided in this description under "Safety",

▸ And have a good knowledge of the generic and specialist standards applicable to the specific application.

### 3.3.3 Warranty and liability

All claims to warranty and liability will be rendered invalid if

▸ The product was used contrary to the purpose for which it is intended,

▸ Damage can be attributed to not having followed the guidelines in the manual,

▸ Operating personnel are not suitably qualified,

▸ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

### 3.3.4 Disposal

▸ In safety-related applications, please comply with the mission time $T_M$ in the safety-related characteristic data.

▸ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

### 3.3.5      For your safety

The unit meets all the necessary conditions for safe operation. However, you should always ensure that the following safety requirements are met:

▸ This operating manual only describes the basic functions of the unit. The expanded functions are described in the PNOZmulti Configurator's online help. Only use these functions once you have read and understood the documentations.

▸ Do not open the housing or make any unauthorised modifications.

▸ Please make sure you shut down the supply voltage when performing maintenance work (e.g. exchanging contactors).

# 4 Function description

## 4.1 Integrated protection mechanisms

The relay meets the following safety requirements:

▸ The circuit is redundant with built-in self-monitoring.

▸ The safety device remains effective in the case of a component failure.

▸ The safety outputs are tested periodically using a disconnection test.

## 4.2 Functions

The expansion module provides additional inputs and dual-pole semiconductor outputs.

The function of the inputs and outputs on the control system depends on the user program created using the PNOZmulti Configurator. The user program is downloaded from the PNOZmulti Configurator to the base unit. The base unit has 2 microcontrollers that monitor each other. They evaluate the input circuits on the base unit and expansion modules and switch the outputs on the base unit and expansion modules accordingly.

The online help on the PNOZmulti Configurator contains descriptions of the operating modes and all the functions of the PNOZmulti control system, plus connection examples.

### 4.2.1 Inputs

The expansion module provides 8 inputs.

Features

▸ Each input can be used to evaluate run monitoring for press applications.

▸ Each input can be configured for pulse detection for run monitoring.

  – The pulse width has to be a least 1 ms for reliable pulse detection.

  – When pulse detection is active, the functions pulse suppression and detection of shorts across contacts are deactivated via the test pulses.

▸ In PNOZmulti Configurator the pulse suppression time can be changed for the inputs. A change of the preset pulse suppression time (see Technical details [📖 22]) can be used to suppress the self-monitored outputs and for interference suppression.

▸ For detection of shorts across contacts of the inputs:

  – In the main program the inputs can be connected with the test pulses of the base unit.

  – In the module program the inputs can be connected to the test pulses of the expansion module.

## 4.2.2 2-pole outputs

The expansion module provides two dual-pole outputs.

**Features:**

▸ Signals at the output

– "0" signal (0 V) at the output (O+/O-):

Output is high impedance

No current to the load

– "1" signal (+24 V) at the output (O+/O-):

Output is low impedance

Current is supplied to the load

▸ The max. capacity at an output depends on the load (see drawing on the max. capacitive load). Connecting a higher capacity may lead to an error.

▸ Operation with electronic contactors has not been tested and may lead to errors. Please contact our Customer Support team if you are using electronic contactors.

▸ Open circuit detection

▸ Cannot be used as a single-pole output

**Output tests**

The following output tests are carried out:

▸ Asymmetric test in error-free operation

– In this test, one output transistor is switched on and the other switched off for the test duration t1 as a maximum. The load is not switched on because of the test. If errors are detected during this test, then an advanced on test is run.

– The test duration t1 is max. 5 ms.

– The repetition time between the asymmetrical tests t2 is at least 30 s.

– The time t3 between two asymmetrical tests O+ and O- is at least 1 s.

▸ Advanced on test in the event of an error

– The advanced on test is always run directly after an asymmetric test, in which an error has occurred. It is used to determine the cause of the error.

– The test is run for the test duration t1 as a maximum

– The test duration t1 is max. 5 ms.

– The test enables precise error diagnostics

– The load must not switch on because of the test.

– The following errors are detected:

Shorts across contacts (external error),

Short circuits and interruptions on the transistors,

Short circuits and open circuit on the connected load

Function diagram of the asymmetric test

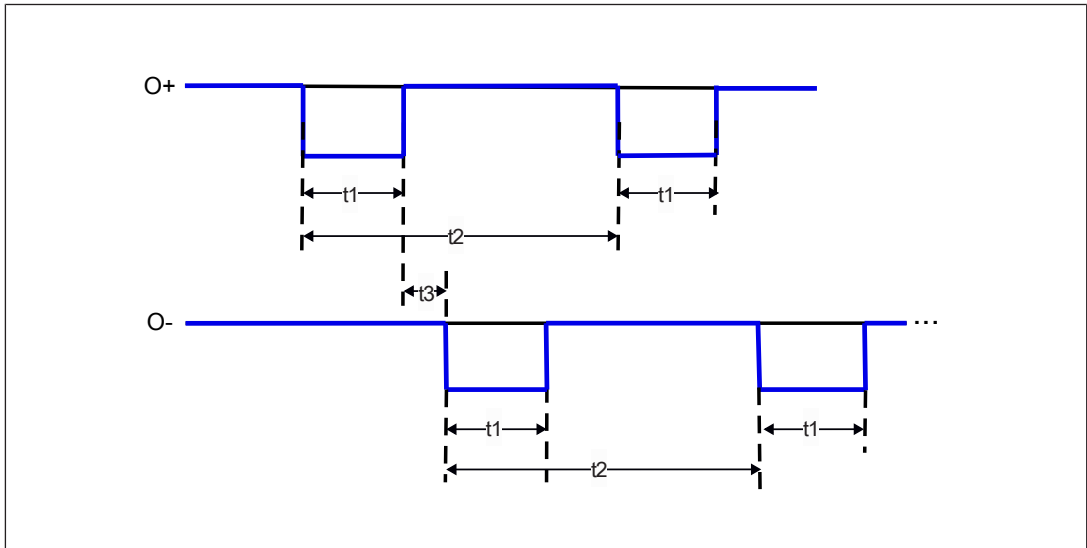

> ⚠️ **WARNING!**
>
> The expanded switch-on tests can cause a capacitive load to switch on un-intentionally.
>
> Please note the test duration t1 of the expanded switch-on test in case of a fault.

## 4.3 System reaction time

Calculation of the maximum reaction time between an input switching off and a linked output in the system switching off is described in the document "PNOZmulti System Expansion".

## 4.4 Block diagram
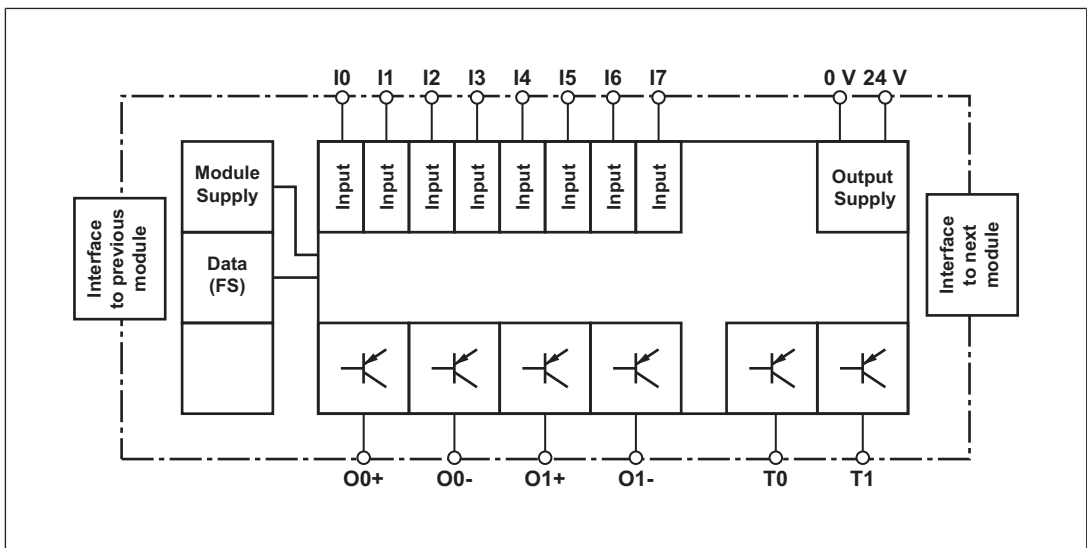

# 5 Installation

## 5.1 General installation guidelines

▸ The unit should be installed in a control cabinet with a protection type of at least IP54.

▸ Fit the safety system to a horizontal mounting rail. The venting slots must face upward and downward. Other mounting positions could damage the safety system.

▸ Use the locking elements on the rear of the unit to attach it to a mounting rail.

▸ In environments exposed to heavy vibration, the unit should be secured using a fixing element (e.g. retaining bracket or end angle).

▸ Open the locking slide before lifting the unit from the mounting rail.

▸ To comply with EMC requirements, the mounting rail must have a low impedance connection to the control cabinet housing.

▸ The ambient temperature of the PNOZmulti units in the control cabinet must not exceed the figure stated in the technical details. Air conditioning may otherwise be required.
> **NOTICE**
>
> Damage due to electrostatic discharge!
>
> Electrostatic discharge can damage components. Ensure against discharge before touching the product, e.g. by touching an earthed, conductive surface or by wearing an earthed armband.

## 5.2 Dimensions in mm

## 5.3 Connecting the base unit and expansion modules

Connect the base unit and the expansion modules as described in the operating manuals for the base modules.

▸ The terminator must be fitted to the last expansion module

▸ Install the expansion module in the position configured in the PNOZmulti Configurator.

The position of the expansion modules is defined in the PNOZmulti Configurator. The expansion modules are connected to the left or right of the base unit, depending on the type.

Please refer to the document "PNOZmulti System Expansion" for details of the number of modules that can be connected to the base unit and the module types.

# 6 Commissioning

## 6.1 General wiring guidelines

The wiring is defined in the circuit diagram of the PNOZmulti Configurator.

Please note:

▸ Information given in the Technical details [📖 22] must be followed.

▸ The position of the expansion module is specified in the Hardware configuration of the PNOZmulti Configurator.

▸ Use copper wiring with a temperature stability of 75 °C.

▸ Protect the supply voltage as follows:

  – Circuit breaker, characteristic C - 6 A

   or

  – Blow-out fuse, slow, 6 A

▸ The unit has two dual-pole semiconductor outputs. These may be configured as single-pole or redundant outputs. The output assignment is defined in the PNOZmulti Configurator. Wire the outputs as described in the table.

> **NOTICE**
>
> **Please note:**
> Loads over 10 kOhm may mistakenly be detected as an open circuit.
> Open circuit detection can be configured and also deactivated in PNOZmulti Configurator.

## 6.2 Connection

**Supply voltage**

| Supply voltage | DC |

| Single output |  |  |

**Feedback loop**

| Feedback loop | Redundant output | |
|---|---|---|
| Contacts from external contactors |  |  |
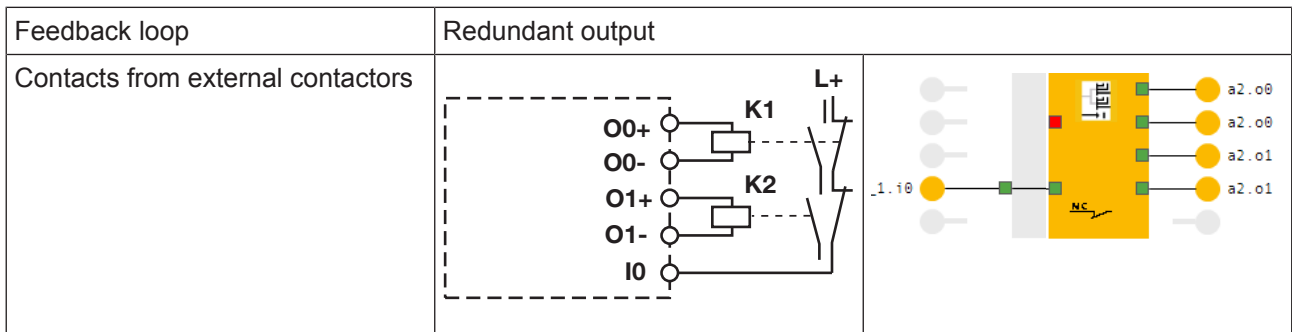

## 6.3 Download modified project to the PNOZmulti system

As soon as an additional expansion module has been connected to the system, the project must be amended in the PNOZmulti Configurator and downloaded back into the base unit. Proceed as described in the operating manual for the base unit.

> **NOTICE**
>
> For the commissioning and after every user program change, you must check whether the safety devices are functioning correctly.
# 7 Operation

The PNOZmulti system is ready for operation when the "POWER" and "RUN" LEDs on the base unit are lit continuously.

## 7.1 LED indicators
