

TA1200 INSTRUCTIONS MANUAL

Size 48 x 24 mm frontal

Panel instrument for measuring **frequencies, velocities in r.p.m. or lineal**, totally programmable by keyboard.

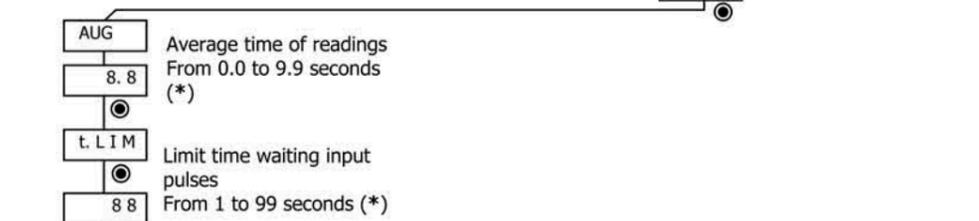

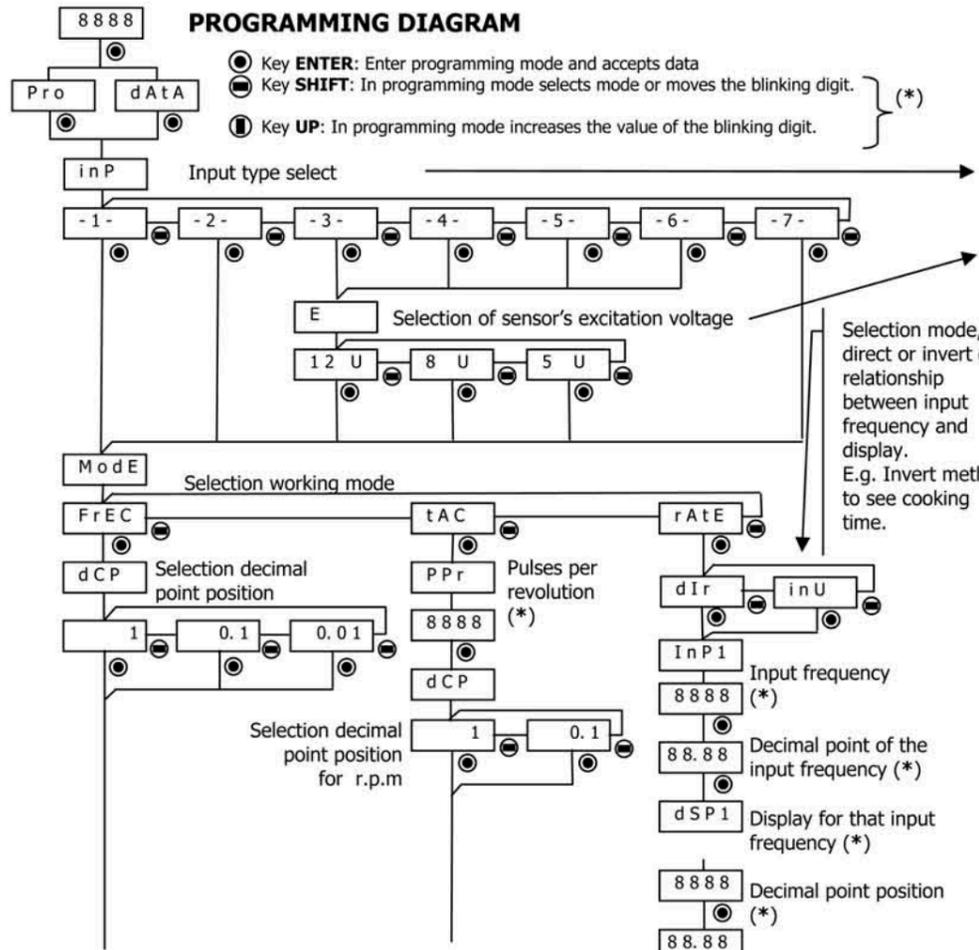

Display range from 0 ÷ 9999, decimal point position programmable.

Keyboard composed of three keys located on the bottom of display.

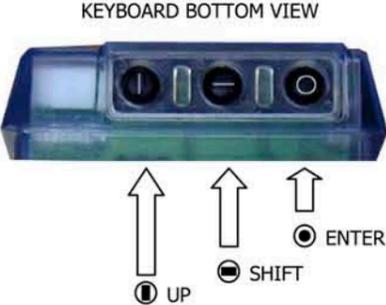

Accepts the connection of most Standard sensor: Pick-up Magnetic, Namur, PNP, NPN, switch, as well as the possibility of measuring frequencies from signals in the range of 10 to 600 V ac. E.g. the frequency of main voltage supply.

Frequency ranges: 99,99 Hz, 999,9 Hz and 9999 Hz

Tachometer in mode TAC programming only the pulses per revolution or in mode Rate programming the relationship between Frequency / display (in desired engineering units)

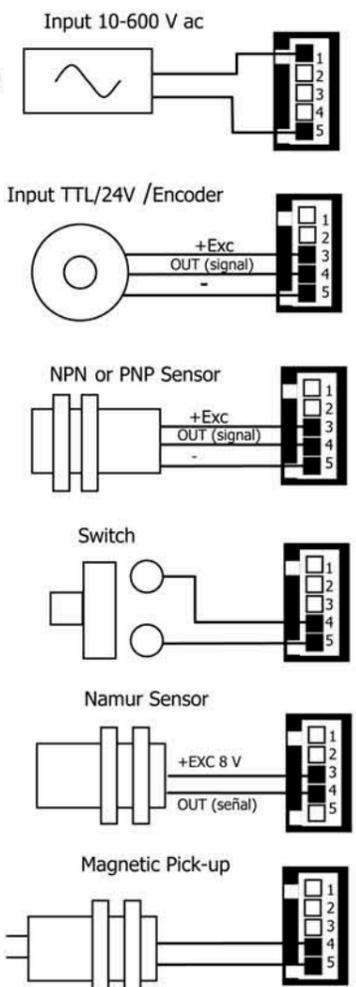

Factory configuration:
TTL, Exc. 5 V, Mode Rate, dir, InP1= 1000, dSP1= 1000, AUG= 0, t.LIM= 10

WARNING
In order to guarantee electromagnetic compatibility, the following guidelines for cable wiring must be followed:
Power supply wires must be routed separated from signal wires. Never run power and signal wires in the same conduit.
Use shielded cable for signal wiring and connect the shield to ground.
The cable section must be $\geq 0.25 \text{ mm}^2$

INSTALLATION
To meet the requirements of the directive EN61010-1, where the unit is permanently connected to the mains supply it is obligatory to install a circuit breaking device easy reachable to the operator and clearly marked as the disconnect device.

CLEANING: The frontal cover should be cleaned only with a soft cloth soaked in neutral soap product.

DO NOT USE SOLVENTS
