Packed by plastic hanger

USE

The product can be used for repairs in auto repair shops, factory machinery maintenance, equipment maintenance in industrial and mining enterprises, electrical maintenance, daily household maintenance, bicycle and motorcycle repairs, etc. It is mainly used for loosening and tightening bolts.

SELLING POINTS

1. The entire set of products is made of Cr-V steel, fully heat-treated for high hardness. The surface is electroplated to resist rust, making it durable and long-lasting.
2. The ratchet head is forged from high-quality chrome-molybdenum steel, providing strong torque. The inner arc design of the drive ensures good locking force and prevents slipping. The quick-release mechanism saves effort—just press to easily release the socket, allowing one-handed operation. The left-right switch lever enables bidirectional adjustment, improving work efficiency. The 72-tooth design requires only a 5° turn for each movement, making it easy to use even in tight
