## Introduction

### Validity of documentation

This documentation is valid for the product PSEN ma1.3a/b-21 VA. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

### Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

### Definition of symbols

Information that is particularly important is identified as follows:

#### **DANGER!**

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

#### **WARNING!**

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

#### **CAUTION!**

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

#### **NOTICE**

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

**INFORMATION**

This gives advice on applications and provides information on special features.

**Safety****Intended use**

The safety function of the safety switch is:

- ▶ Safe detection of the magnetic actuator within the response range

The safety switch meets the requirements in accordance with:

- ▶ EN 60947-5-3: PDDDB only in connection
  - with the operator PSEN ma1.3-08 VA and
  - the suitable evaluation devices (see [Requirements and connection to evaluation devices](#) [ 10]).

The following is deemed improper use in particular

- ▶ Any component, technical or electrical modification to the product,
- ▶ Use of the product outside the areas described in this manual,
- ▶ Use of the product outside the technical details (see [Technical details](#) [ 16]).

**NOTICE****EMC-compliant electrical installation**

The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

**Safety regulations****Safety assessment**

Before using a device it is necessary to perform a safety assessment in accordance with the Machinery Directive.

Functional safety is guaranteed for the product as a single component. However, this does not guarantee the functional safety of the overall plant/machine. In order to achieve the required safety level for the overall plant/machine, define the safety requirements for the plant/machine and then define how these must be implemented from a technical and organisational standpoint.

### Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

- ▶ Are familiar with the basic regulations concerning health and safety / accident prevention,
- ▶ Have read and understood the information provided in the section entitled Safety
- ▶ Have a good knowledge of the generic and specialist standards applicable to the specific application.

### Warranty and liability

All claims to warranty and liability will be rendered invalid if

- ▶ The product was used contrary to the purpose for which it is intended,
- ▶ Damage can be attributed to not having followed the guidelines in the manual,
- ▶ Operating personnel are not suitably qualified,
- ▶ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

### Disposal

- ▶ In safety-related applications, please comply with the mission time  $T_M$  in the safety-related characteristic data.
- ▶ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

### For your safety

#### **WARNING!**

#### **Loss of safety function due to manipulation of the interlocking device**

Manipulation of the interlocking device may lead to serious injury and death.

- You should prevent any possibility of the interlocking device being manipulated through the use of a spare actuator.
- Keep the substitute actuator in a safe place and protect it from unauthorised access.
- If spare actuators are used, these must be installed as described in [Installation](#) [ 13].
- If the original actuators are replaced with substitute actuators, the original actuators must be destroyed before disposal.

## Unit features

- ▶ The actuator PSEN ma1.3-08 VA belongs to the safety switch.
- ▶ Coded actuator
- ▶ Safety switch with cable (5 m/ 10 m)
- ▶ 2 safety contacts (reed contacts - N/O)
- ▶ 1 auxiliary contact (N/O)
- ▶ Design: cylindrical with threaded sleeve
  - Safety switch M12
  - Actuator M12: PSEN ma1.3-08 VA
- ▶ Operation Magnetic
- ▶ Switching voltage 24 VDC
- ▶ LED to display switch status
- ▶ Switch and actuator from stainless steel

## Function description

If the actuator is within the response range (safety gate closed), the safety contacts and the auxiliary contact on the safety switch will be closed and the LED will light.

Operate the PSEN ma1.3a/b-21 VA in conjunction with the following components:

- ▶ Actuator PSEN ma1.3-08 VA (see [Order reference \[18\]](#)) and
- ▶ a connected evaluation device (see [Requirements and connection to evaluation devices \[10\]](#)).

## Block diagram

### Operating distances

#### Legend

- $S_{ao}$  Assured operating distance
- $S_{omin}$  Min. operating distance
- $S_{ar}$  Assured release distance

The offset-independent values for the switching distances are included in the [Technical details](#) [16].

### Lateral and vertical offset

#### Actuator PSEN ma1.3-08/VA

#### Legend

- [1] Lateral offset
- [2] Vertical offset
- [3] Sensing faces

**Assured operating distance  $S_{ao}$  in mm**

Lateral offset	Vertical offset		
	0	2	4
0	8.0	7.2	5.8
2	7.2	6.6	5.1
4	5.8	5.1	3.2

The stated values are valid at a temperature of 20 °C.

**Wiring**

- ▶ Information given in the [Technical details \[16\]](#) must be followed.
- ▶ Calculation of the max. cable length  $l_{max}$ :

$$l_{max} = \frac{R_{lmax} - R_i}{R_l / km}$$

$R_{lmax}$  = Max. overall cable resistance (see evaluation device's technical details)

$R_i$  = Internal resistance sensor (see [Technical details \[16\]](#))

$R_l / km$  = Cable resistance/km of the cable (see technical details cable)

- ▶ Ensure the wiring and EMC requirements of EN 60204-1 are met.
- ▶ Depending on which evaluation device is used, the overall cable resistance must be checked; before commissioning it may also be necessary to check the cross circuit detection function.  
Perform the checks as described in the operating manual for the evaluation device.
- ▶ The safety contacts are not short circuit-proof.
- ▶ UL requirement: the supply voltage must be provided via a Class 2 power supply.

**Pin assignment**

The safety switch is shown in an unoperated condition.

**NOTICE**

The auxiliary contact with LED

- may only be operated with a supply voltage of up to 24 VDC
- **cannot** be connected in series
- may **not** be used for safety circuits

## Requirements and connection to evaluation devices

For use of PSEN ma1.3a/b-21 VA in accordance with DIN EN 60947-5-3 an evaluation device must be connected.

Connect the PSEN ma1.3a/b-21 VA

- ▶ **either** with a certified Pilz evaluation device
- ▶ **or** with an evaluation device with defined properties

### **Certified Pilz evaluation devices are, for example:**

- ▶ PNOZelog for safety gate monitoring
  - PNOZ e1p, PNOZ e1.1p, PNOZ e1vp
  - PNOZ e5.11p
  - PNOZ e6vp, PNOZ e6.1p
- ▶ PNOZpower for safety gate monitoring
  - PNOZ p1p, PNOZ p1vp
- ▶ PNOZsigma for safety gate monitoring:
  - PNOZ s3
  - PNOZ s4
  - PNOZ s5
- ▶ PNOZ X for safety gate monitoring
  - PNOZ X2, PNOZ X2.5P, PNOZ X2.7P, PNOZ X2.8P, PNOZ X2.9P, PNOZ X2C
  - PNOZ X3, PNOZ X3.1, PNOZ X3P, PNOZ X3.10P
  - PNOZ X4
  - PNOZ X5, PNOZ X5J
  - PNOZ Ex
- ▶ PNOZmulti for safety gate monitoring
 

Configure the switch in the PNOZmulti Configurator with switch type 3.
- ▶ PSS for safety gate monitoring with standard function block SB064, SB066 or FS\_Safety Gate
- ▶ PSSuniversal PLC for safety gate monitoring with function block FS\_SafetyGate

The correct connection to the respective evaluation device is described in the operating manual for the evaluation device. Make sure that the connection is made in accordance with the specifications in the operating manual for the selected evaluation device.

### **Defined properties of evaluation devices:**

- ▶ 2-channel with feasibility monitoring
- ▶ Open circuit monitoring of the safety switch is performed
- ▶ Inputs and outputs on the evaluation device must fulfil the requirements of IEC 61131, Type 3

- ▶ Technical data of the evaluation device must fulfil the requirements in the [Technical details \[16\]](#) of PSEN ma1.3a/b-21 VA
  - Always comply with the max. switching current safety contacts of PSEN ma1.3a/b-21 VA.
- ▶ Outputs at the evaluation device must only be switched on again when both reed contacts at the safety switch have been opened and closed (partial operation lock)

**INFORMATION**

**Risk time in accordance with DIN EN 60947-5-3**

The risk time is made up of the reaction time of the sensor (see [Technical details \[16\]](#)) and the processing and delay times of the evaluation device (s. operating manual for the relevant evaluation device).

Fig.: Dual-channel connection PSEN ma1.3a/b-21 VA to the input circuits of an evaluation device

**Examples for connection to Pilz evaluation devices:**

### Auxiliary contact with LED

The auxiliary contact and the LED indicate the status of the safety contacts.

Actuator in the response range	Safety contacts and auxiliary contact	LED
Yes	Closed	lights
No	Open	Off

### Installation

- ▶ The unit can be installed in any position. Safety switches and actuators must be installed so that the sensing face of the safety switch is exactly opposite the sensing face of the actuator.
- ▶ If possible, do not install the safety switch and actuator on to ferromagnetic material. Changes to the operating distances are to be expected.

**CAUTION!****Potential loss of safety function due to changed device properties**

The unit's properties may be affected if installed in an environment containing electrically or magnetically conductive material.

- Please check the operating distances and the assured release distance.

**CAUTION!****Possible loss of the safety function by changing the release distance  $S_{ar}$  with non-flush installation**

Installing the safety switch non-flush within electrically or magnetically conductive material, the value for the assured release distance  $S_{ar}$  can change.

- Check the assured release distance  $S_{ar}$ .

- ▶ Safety switches and actuators must be positioned so that they are secured against a change of position.
- ▶ The safety switch and actuator should only be secured using screws and nuts made of non-magnetic material (e.g. brass or stainless steel).
- ▶ Avoid the risk of damages from foreseeable external influences by attaching the safety switch and actuator. If necessary, safety switch and actuator have to be protected.

**INFORMATION**

Protect the actuator from unauthorised removal (e.g. via a screw lock or concealed installation) and from contamination.

- ▶ Prevent self-loosening of the fastening elements of safety switch and actuator.
- ▶ The fastening of safety switch and actuator has to be sufficiently stable to ensure the proper operation of the safety switch and the actuator.
- ▶ The distance between two safety switches must be maintained (see [Technical details \[16\]](#)).
- ▶ Safety switches and actuators
  - Should be kept away from iron swarf
  - Should not be exposed to strong magnetic fields
- ▶ Prevent the safety switch and actuator being exposed to heavy shock or vibration.
- ▶ Make sure that the safety switch and actuator cannot be used as an end stop.
- ▶ Circumvention of the safety switch in a reasonably foreseeable manner must be prevented.
- ▶ Please note the installation measures in accordance with EN ISO 14119 for a proximity switch type 4 with coding level Low.

- ▶ Alignment errors of the guard must not adversely affect the safety function of the guard.
- ▶ The assured operating distance  $S_{ao}$  and the assured release distance  $S_{ar}$  must be tested under real conditions.
- ▶ Protect the safety switch from UV light or direct sunlight.

**Installation of safety switch**

 <p style="text-align: center;">Sensing face</p>	<p>Slide the switch through the hole in the mounting surface with the sensing face towards the actuator.</p>
	<p>Attach the switch using 2 M12x1 hexagonal nuts.</p> <p>Also note the max. torque setting (see <a href="#">Technical details [16]</a>).</p>

**Installation with actuator PSEN ma1.3-08/VA**

 <p style="text-align: center;">Sensing face</p>	<p>Slide the actuator through the hole in the mounting surface with the sensing face towards the safety switch.</p>
	<p>Attach the actuator using 2 M12x1 hexagonal nuts.</p> <p>Also note the max. torque setting (see <a href="#">Technical details [16]</a>).</p>

### Adjustment

- ▶ The safety switch may only be used with the corresponding actuator PSEN ma1.3-08 VA.
- ▶ Always test the function with a connected evaluation device.
- ▶ The stated operating distances (see [Technical details](#) [16]) only apply when the safety switch and actuator are installed according to the specifications [Installation](#) [13]. Operating distances may deviate if other arrangements are used. Note the maximum permitted lateral and vertical offset (see [Operating distances and Lateral and vertical offset](#) [8]).

### Periodic test

- ▶ Carry out a monthly function test on the safety switch and actuator.
- ▶ Always test the function with a connected evaluation device.
- ▶ The safety function may only be checked by qualified personnel.

**NOTICE**

The safety function should be checked after initial commissioning and each time the plant/machine is changed. The safety functions may only be checked by qualified personnel.
